Managed Oracle Delivery.

Human-led expertise. Modernized delivery. Built for mission-critical scale.

powered by

Why enterprise teams choose Nabhaas

Oracle DBA support, with no escalation queues

Proprietary patching automation via TAB (Total Automation Box)

Built to adapt - configurable support tiers, modular deliverables, responsive SLAs

End-to-end delivery with strategic and technical depth

Designed for OCI environments: scalable, secure, dependable

Compliance-ready practices like DR drills, RCA documentation, and reporting

Delivered by senior engineers, not ticketing workflows

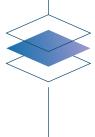

Fixing Ground Zero in Oracle Operations

Managing enterprise Oracle databases shouldn't feel like a constant scramble.

But for many growing teams, that's exactly what it becomes - reactive incident handling, inconsistent patching, unclear ownership, and an over-reliance on internal teams to 'just figure it out'.

Nabhaas Managed Delivery reframes how Oracle support is delivered.

We operate as a strategic partner, bringing OCI-native expertise, proprietary automation accelerators, and senior engineers who work closely with your team. The result: databases that aren't just maintained, but continuously optimized, protected, and future-ready.

The Nabhaas Delivery Philosophy: From Ground Zero to Cloud

At the heart of our offering is a belief: Oracle doesn't just need support. It needs ongoing strategic attention - starting at the operational core and scaling all the way up to cloud modernization.

With Nabhaas, you get:

Specialist-led delivery

Oracle ACE experts and Oracle Certified professionals, not generalist support teams

OCI-native thinking

Always aligned with OCI modernization best practices

Outcome-first mindset

Systems shaped around your performance, resilience, and scale goals

Integrated operating model

We embed into your team, not operate as a vendor

Our full-stack Consulting Approach

We don't just deliver services. We deliver confidence with a consulting stack built to address efficiency, reliability, expertise, and flexibility.

Efficiency Layer

TAB (Total Automation Box) Nabhaas' proprietary patching automation engine for Oracle on OCI

Proactive Incident Management + DR Drills

Expertise Layer —

Exadata + High Availability (HA) Capabilities + Managing OCI on heterogeneous environments

Standby DBA Support + Modular SLAs

Adherence to managed database compliance requirements across industries

Domain Layer —

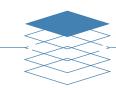

Deep Oracle EBS expertise to strengthen the application stack

Strategic Tenets that Power Our Delivery

Total Automation Box

TAB is our in-house Oracle patching automation system that runs pre-, during-, and post-patch workflows across environments in parallel. It replaces manual checklists, staggered patching efforts, and last-minute escalations with one clean, continuous process.

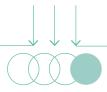

tab transforms patching from a recurring fire drill into a seamless, parallelized workflow.

Proactive Incident Management

Our systems proactively detect anomalies using real-world performance metrics tailored to your environment. Every signal is mapped to how your workloads actually perform. You're not waiting for a support ticket, you're staying ahead of the curve.

This isn't reactive support. It's proactive stability.

Built for Resilience Across All OCI Classes

From RAC clusters to On Prem or OCI, hybrid Exadata configurations, and cloud-native disaster recovery implementations - our team is fluent in complex, high-availability environments. We don't assume resilience: we conduct post-patching testing, along with DR drills integrated into our delivery cadence.

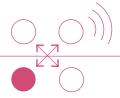

We ensure resilience isn't assumed. It's validated.

Standby DBA: Built-In Flexibility

Unexpected surge? Temporary gap? Our standby DBA model ensures expert capacity can be activated within 24 hours, without having to onboard or scale your internal team. This flexibility is a cornerstone of how we deliver reliability without compromise.

Surge-ready support, whenever your workload demands it.

Compliance Layer

Nabhaas is built to align with industry-specific managed database compliance needs, following the specific requirements of each customer. Whether it's data residency, access logging, patch tracking, or audit readiness, Nabhaas is built to support what your industry needs.

Compliance isn't an afterthought, it's part of the delivery architecture.

Domain Layer

From core database health to the Oracle EBS applications running above it, we bring deep understanding of how infrastructure supports business-critical processes. This domain layer ensures your application stack runs with resilience, context, and confidence.

Beyond supporting databases, we support the systems that depend on them.

Configurable Deliverables & Adaptive SLAs

Our engagements are modular by design. We configure deliverables and response timelines based on your org's rhythms.

Modernization Review

OCI architecture, cost, and capability recommendations DR Drills, capacity planning reviews, cloud cost analysis, etc

On-demand Weekly Monthly Quarterly Yearly **Ops Digest** Strategic Modernization RCA & Tech Reports Review Deep dives into root Overview of key cause, blockers or incidents, changes, High-level health and system events optimization discussion and fixes with leadership Patch Calendar Visibility into upcoming Oracle VM / GI / RU patching maintenance schedules

(via TAB)

All deliverables are fully configurable to your internal review cadence and goals.

SLA Blocks

These are illustrative and can be tailored to your requirements.

P1 Incident Response (Live DBA)

High-priority incident response

DBA standby activation

BUSINESS DAYS

dedicated availability for seamless support DEDICATION

DBA support for critical enterprises round the clock

These aren't templates. They're starting points. Everything scales and customizes with your ops cadence.

Why Nabhaas?

Nabhaas is built for enterprise teams that can't afford uncertainty in their Oracle stack.

Strategic Oracle DB expertise Orchestrated by proven professionals with a deep understanding of complex database systems	Deep fluency in OCI-native best practices Backed by engineers proficient in end-to-end database architecture, optimization, and lifecycle management
Built-in innovation through TAB Flexibility via standby DBA, expert-led, modernized execution for Managed Delivery success	Proven enterprise readiness With our deep expertise, organizations have consistently achieved measurable improvements in database
High service efficiency Driven by mature delivery processes, reduced escalation rates, and consistent execution quality	If Oracle runs at the core of your operations, we make sure it runs at its best, always.

Start with a Consulting Sprint

Want to see the Nabhaas delivery difference before committing to a long-term model? Kick off with a Consulting Sprint - a concentrated engagement focused on your most urgent Oracle ops challenges.

It's the fastest way to stabilize your operations and experience our strategic value firsthand.
